DEEP DIVE STRATEGY PRESENTATION

SuperK-Taxi Korea: From challenger to a strong #2

A back-to-basics growth strategy for H2 2024 - 2026: win driver supply, win the Korean rider, and turn a shifting regulatory landscape into a tailwind

Prepared by: Head of Strategy, SuperK-Taxi Korea
For discussion with: Korea CEO and Asia Regional Strategy Head
Date: Seoul, May 2024 | **Decision horizon:** launch from August 2024

Confidential - for internal strategic discussion. Market data reflects publicly available information as of May 2024; SuperK-T baselines are internal planning estimates and should be validated against finance/BI data before the investment committee.

EXECUTIVE SUMMARY

Executive summary: SuperK-T can become a strong #2 by 2026 if we win Seoul's supply first, own the segments the incumbent under-serves, and use 2024's regulatory shifts as a tailwind

Where we stand (the candid view)

- **The market is locked by one app:** Kakao T handles ~94% of app-hail calls and ~12M MAU; SuperK-T is sub-scale at an est. ~4% share and ~0.8M MAU.
- **Our core problem is supply density, not brand:** too few cars in core zones means long ETAs and missed rides at peak times, so riders go back to the incumbent.
- **The window is open now:** corporate-taxi drivers are down ~31% since 2019, driver anger at the incumbent is high, regulators are scrutinising Kakao, and inbound tourism is heading for 20M.

The ask for this discussion

- Approve a **KRW 170bn envelope released in stages** (H2'24-2026); release **Phase 1 KRW 40bn** for Aug-Dec 2024.
- Approve the **'Fair Driver Deal'** pricing: 0% commission for 6 months, then a flat 2.5%.
- Give the Korea team a mandate for **corporate-fleet partnerships** and to screen acquisition options.
- Regional support: prioritise global-tourist features, plus access to group EV and AV partnerships.

What we will do: three moves, in sequence

1 Supply first: 'Fill the idle shift'

Partner with corporate-taxi operators to fill empty shifts, offer the market's fairest driver deal, build a new-driver pipeline, and use a peak-time engine. Goal: **40k weekly active drivers** by 2026 (from ~12k).

2 Win the Korean rider, segment by segment

Focus on 4 segments the incumbent under-serves: **inbound tourists, business (B2B), late-night 20-40s, and airport**. Match Korean UX norms (payments, POI search, receipts). No blanket coupons.

3 Future-proof for leadership

EV fleet and charging programme, readiness to aggregate autonomous vehicles (AVs), legal taxi pooling, MaaS/B2G links, and AI dispatch. Future bets are capped at ~9% of spend until core KPIs are hit.

Sequencing: Phase 1 'Ignite Seoul' (Aug-Dec 2024) → Phase 2 'Densify & extend' (2025: Incheon/Gyeonggi, Busan) → Phase 3 'Scale & future' (2026). Each phase is released only after hitting the prior gate's KPIs.

2026 ambition (exit run-rate, base case)

Share of app-hailed taxi trips	~4% → 13%
Monthly active riders	0.8M → 3.0M
Weekly active drivers	~12k → 40k
Franchise ('SuperK-T Plus') fleet	~6k → 20k
Seoul core-zone pickup ETA (median)	~9 min → ≤5 min
Peak-hour request fulfilment (Seoul)	~65% → ≥88%

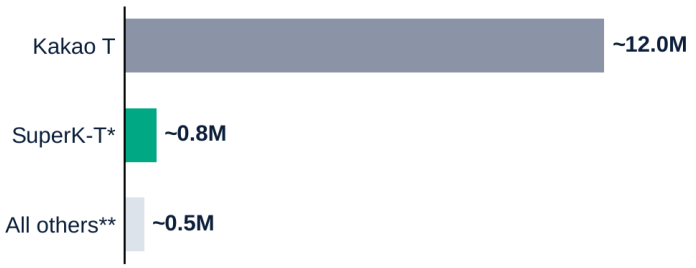

Source / notes: KFTC (Feb 2023 Kakao Mobility decision); KNJCTA corporate-taxi driver statistics; Korea Tourism Organization; MOLIT / Taxi Development Act. SuperK-T baselines (share, MAU, drivers, ETA) are internal planning estimates. Share = SuperK-T share of app-hailed taxi trips. Detail in Appendix A1-A6.

Market reality: a ~KRW 11tn taxi market locked by one app. Driver scarcity, a fare shock and regulatory scrutiny now open a window for a credible #2

Market snapshot (2023 - May 2024)

- **~250k licensed taxis** (~165k individual / ~85k corporate); Seoul ~72k. Est. **~KRW 11tn** in yearly fares, of which ~45% is app-dispatched (est.) and rising.
- **Supply shock:** corporate-taxi drivers fell from ~102k to ~70k (2019-23); in Seoul, ~30.5k to ~21k. The driver base is ageing (about 1 in 4 drivers nationwide is 65+, and more in Seoul individual taxis).
- **Demand shock:** the Seoul base fare rose 26% (KRW 3,800 → 4,800, Feb 2023) and the night surcharge widened to 22:00-04:00 (up to 40%). Riders are more price- and reliability-sensitive.
- **New demand pool:** 11.0M inbound visitors in 2023, with a government target of 20M for 2024. Most cannot easily use domestic-only apps.

Taxi-app monthly active users, early 2024 (indicative)

Competitive dynamics

- **Kakao T dominates:** ~94% of app-hail calls (KFTC), a 40k+ 'Blue' franchise fleet, and a super-app ecosystem. Network effects are strong on the rider side.
- **But the incumbent is under pressure:** KFTC fined it ~KRW 27bn (2023) for steering calls to its own fleet. After public presidential criticism (Oct 2023) it pledged a 2.8% franchise fee. An FSS accounting review and a further KFTC rival-call case were open in 2024.
- **The long tail is sub-scale:** TADA (ownership in flux after failed sale talks), i.M Taxi (premium van niche), Onda (Tmoney, backed by the associations) and municipal apps (e.g., Busan Dongbaek Taxi).
- **Switching costs on the supply side are low:** drivers already use several apps. Supply is the contestable side of the network.

SuperK-T: challenges (candid)

- Est. ~4% share and low density lead to long ETAs and peak-time failures, which cause rider churn
- Brand awareness is still building after the rebrand; we have little presence outside Seoul
- UX gaps vs Korean norms: local payments, POI/entrance search, receipts
- Driver trust in the platform's economics is unproven

SuperK-T: opportunities

- **Global app and account:** tourists ride on arrival, with no local sign-up needed
- **Neutral 'fair platform'** position at a time of incumbent scrutiny
- **Monthly-wage rule (Aug 2024)** pushes operators to seek productivity
- Group tech (dispatch, safety, AV/EV partners) and a global B2B base

Strategic imperatives: what we must get right

1
Density before breadth
Win Seoul core zones and the airports before expanding

2
Fairest platform for drivers
Economics plus transparent dispatch

3
Own under-served segments
Tourists, B2B, late-night, airport

4
Korea-native UX
Parity on local norms; global features as our edge

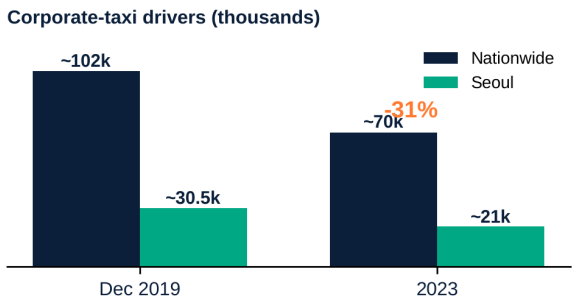

5
Regulation as a tailwind
Fair dispatch, monthly wage, pooling, EV

Source / notes: Fleet: MOLIT/KOTSA (~250k taxis; Seoul ~72k). Drivers: KNJCTA (corporate drivers Dec 2019 vs 2023, rounded). KFTC decision on Kakao Mobility (Feb 2023, ~94% call share, ~KRW 27bn fine). Seoul Metropolitan Govt fare notice (Feb 2023). KTO arrivals. MAU: third-party app trackers (Mobileindex/WiseApp), rounded and indicative; *SuperK-T internal estimate; **TADA, i.M, Onda, municipal apps combined. Market size = team estimate (App. A4).

Back to basics, part 1 - supply: 'Fill the idle shift'. Add ~28k weekly active drivers by 2026 through corporate-fleet partnerships, the market's fairest driver deal and a new-driver pipeline

Why supply comes first

- **Reliability is the product.** ETA and fulfilment drive rider retention more than price. Every missed peak request teaches a rider to open the incumbent first.
- **Idle capacity exists:** Seoul's ~22k corporate taxis have only ~21k drivers. Under a 2-shift model, **roughly half of shift capacity sits idle**.
- **Timing:** from 20 Aug 2024 the monthly-wage rule raises operators' fixed labour cost, so they need more trips per shift. We sell exactly that.

L1 SuperK Fleet Partner (corporate taxis)

- Target **60 Seoul operators / ~6k vehicles** by Q2 2025 (~25% of the Seoul corporate fleet)
- Co-fund driver recruitment and training; a **productivity guarantee** (minimum peak trips per shift) and franchise dispatch priority
- Fleet dashboard for operators; revenue share on the extra shifts we fill
- Pilot **part-time night/weekend shifts** (allowed since 2022); be ready for a lease model if MOLIT pilots it

L2 'Fair Driver Deal' (individual drivers)

- **0% commission for 6 months** for new franchise drivers, then a **flat 2.5%** (below the incumbent's 2.8%); no paid membership
- **Published dispatch rules plus an independent audit**, the opposite of call-steering; non-exclusive (multi-homing is welcome)
- Daily payouts; LPG/EV charging, maintenance and insurance discounts
- Senior-friendly driver app (large text, voice); onboarding desks at LPG stations

L3 SuperK Driver Academy (new supply)

- Fund KOTSA qualification test prep and fees; use the fast-track licensing introduced in 2022
- Target career-switchers in their 30s-50s, delivery riders, women and early retirees, via job portals and partners
- **Hourly earnings guarantee for the first 8 weeks**, then placement with Fleet Partners
- Goal: **5k new drivers by end-2025**, which helps reverse the ageing of the driver base

L4 Peak-time supply engine and ops excellence

- Night 'power zones', Fri/Sat 22:00-02:00: Gangnam, Hongdae, Itaewon, Jongno, Yeouido; boosts kept within the KRW 5,000 call-fee cap
- Demand heatmaps, driver quests, and airport queue programme (Incheon/Gimpo)
- Destination-blind auto-dispatch for the franchise fleet, which cuts ride refusals
- **Seoul Ops war-room:** zone-level ETA/fulfilment reviewed daily

Supply KPIs: weekly active drivers ~12k → 18k (Dec'24) → 30k (Dec'25) → 40k (Dec'26) | franchise fleet ~6k → 20k | Seoul peak fulfilment ≥88% | driver NPS +30 | supply cost per incremental weekly active driver tracked monthly

Source / notes: KNJCTA driver statistics (rounded); Seoul corporate fleet ~22k vehicles (Seoul Metropolitan Govt / associations). Monthly-wage system: Taxi Development Act Art. 11-2 (Seoul since Jan 2021, nationwide by 20 Aug 2024; a deferral bill was under debate in May 2024). MOLIT taxi supply package (Oct 2022): part-time corporate driving, simpler licensing, late-night call fee of up to KRW 5,000, rotation-system ('bu-je') lifted. Incumbent fee per Kakao Mobility announcements (late 2023).

Back to basics, part 2 - riders: win four high-value segments the incumbent under-serves, with Korea-native UX as the minimum standard and global features as our edge

Segment	Why we can win it	Our play (from Aug 2024)	2026 target
Inbound tourists (11M → 20M target)	Domestic apps need a Korean phone number or card. Our global account works on arrival. Visitors already know our brand.	Ride on arrival with foreign cards and major Asian wallets; in-app translated chat; Incheon Airport, KTO, hotel and K-culture event tie-ups; fixed airport fares; English/Chinese/Japanese support	#1 app for foreign visitors; ~35% of SuperK-T trips
Business & corporate (B2B)	Corporates want central billing, Korean tax receipts and duty-of-care. Few local apps offer these well.	'SuperK-T for Business': central billing, e-tax invoices, expense-tool links, late-night staff rides, CO2 reporting; start with MNCs, finance firms, hotels and the group's global accounts	1,000 corporate accounts; ~15% of GBV
Late-night urban 20-40s	Fri/Sat night is when the incumbent fails most: refusals, surge fees, waits.	Pickup guarantee in power zones (KRW 3,000 credit if no car in 10 min); taxi pooling to split fares; trip-sharing safety features; targeted zone campaigns, not blanket coupons	Repeat rate (M3) ≥40% in power zones
Airport & long-distance	High fare, high intent; families and groups need larger vehicles.	Fixed upfront fares to and from Incheon/Gimpo; scheduled rides; 'SuperK Van' for groups and luggage; KTX/SRT station pick-ups	Top-2 airport app; ~10% of trips

Korea-native UX basics

- **Pay:** Naver Pay, Toss Pay, Samsung Pay, Kakao Pay, local cards; cash and corporate receipts
- **Find:** Korean POI and building-entrance search, road-name and lot-number addresses, subway-exit pins
- **Sign-up:** PASS phone verification, Naver/Apple login, 24/7 Korean support
- **Trust:** upfront fares, trip sharing via KakaoTalk/SMS, lost-and-found
- **Speed:** 2-tap hail; ETA accuracy ≥90%

Retain & monetise

- **Loyalty partnerships:** telco membership points, card-issuer cashback, Naver/Toss point earn
- **'SuperK-T Pass'** subscription: ride discounts plus priority matching at peak times
- Higher-margin products (Van, premium, airport) lift the blended take rate to ~5.5% by 2026

Brand & go-to-market

- Build on the rebrand: **'Fair for drivers. Reliable for you. Global wherever you go.'**
- Hyper-local Seoul campaigns timed with supply density; scale spend only where ETA ≤6 min
- Spend discipline: rider incentives capped by zone-level payback (target <9 months)

Rider KPIs (base case)

- **MAU** 0.8M → 1.3M (Dec'24) → 2.2M (Dec'25) → 3.0M (Dec'26)
- **Rider NPS** above the incumbent in power zones; app rating ≥4.6
- **Share of foreign-visitor app rides** ≥50% by 2026; 1,000 B2B accounts

Source / notes: KTO inbound arrivals (11.0M in 2023) and MCST 2024 target (20M). Taxi pooling permitted for platform taxis since Jan 2022 (Passenger Transport Service Act amendment). Segment targets are base-case planning figures. Rider KPIs are measured on the Seoul Capital Area first.

Future-proofing: build lasting advantages in electrification, autonomy, shared rides and data, so that today's #2 can become a co-leader by the end of the decade

Electrify: 'SuperK Green'

- EV financing and charging bundle for franchise drivers (OEM fleet pricing, charging-operator tariffs, fast chargers at Fleet Partner depots)
- Help drivers stack national and local EV-taxi subsidies
- Green ride option plus CO2 reports for B2B Scope-3 needs
- **Target: 50% of the franchise fleet on EVs by 2027**

Autonomy-ready platform

- Position as the **demand aggregator** for AV operators, not an AV developer, so we stay capital-light
- Use group AV partnerships and bid for Seoul pilots (Gangnam late-night robotaxi, Sangam)
- Build hybrid dispatch (human plus AV) and remote-assist ops capability
- Target: first AV rides on the app in 2026

Shared & multimodal (MaaS)

- **'SuperK Share'** taxi pooling (legal since 2022) for late-night peaks: lower fares, more trips per car
- First/last-mile links with transit: KTX/SRT stations, airport rail, Seoul's Climate Card ecosystem
- B2G demand-responsive transport for rural and elderly users with local governments

Data, AI & safety

- AI demand forecasting, dynamic driver incentives and dispatch tuned to Seoul micro-zones
- AI translation for tourists; fatigue and safety alerts that support older drivers
- Share anonymised data with KOTSA and cities to **shape fair regulation**

Social sustainability

- Driver welfare: rest lounges, health checks, accident and income insurance
- Accessible vehicles with cities; senior-rider assisted booking via call centre
- Annual ESG and driver-earnings transparency report

Horizons and guardrails

- **H1 (2024-25):** pooling pilot, EV bundle, AI dispatch, B2B CO2 reporting
- **H2 (2025-26):** MaaS/B2G contracts, AV pilot participation, EV share ≥30%
- **H3 (2027+):** mixed human/AV fleet, platform-level profitability, co-leadership
- **Guardrail:** future bets stay ≤ KRW 15bn (~9% of envelope) until core gates are met

Why this matters for long-term leadership

- EV and pooling **lower cost per trip**, which funds a structurally better driver deal
- AV aggregation and MaaS links create **non-copyable supply and demand sources**
- A credible ESG and fair-platform record is a **regulatory asset** while platforms are under scrutiny
- Data partnerships turn us from a 'foreign challenger' into a **local mobility partner**

Source / notes: Taxi pooling legal since Jan 2022; Seoul announced a late-night autonomous-taxi pilot in Gangnam for H2 2024; Climate Card (unlimited transit pass) launched by Seoul in Jan 2024; Ministry of Environment 2024 EV subsidy guidelines include extra support for EV taxis; 65+ taxi drivers must pass KOTSA qualification-maintenance tests. Targets are planning figures.

Execution: a stage-gated KRW 170bn plan starting in August 2024. Each phase is released only when density and unit-economics gates are met

Phase 1 | Aug-Dec 2024
IGNITE SEOUL

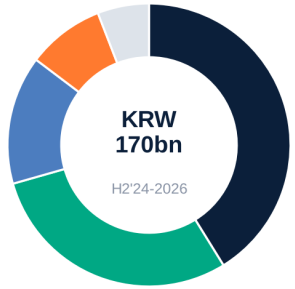

- Launch Fair Driver Deal plus Academy; first 25 Fleet Partners
- 5 night power zones plus airport; tourist package live
- UX parity sprint (payments, POI, receipts); B2B beta
- Budget: KRW 40bn

Phase 2 | 2025
DENSIFY & EXTEND

- Seoul-wide density; extend to Incheon/Gyeonggi, then Busan
- 60 Fleet Partners; SuperK Share pooling; EV bundle
- SuperK-T for Business at scale; SuperK-T Pass
- Budget: KRW 75bn

Phase 3 | 2026
SCALE & FUTURE

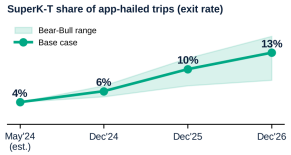

- Strong #2 nationally in the top-5 metros
- AV pilot rides; MaaS/B2G contracts
- Seoul power zones contribution-positive
- Budget: KRW 55bn

Driver & fleet supply	**KRW 70bn**
Rider growth	**KRW 50bn**
Product & tech	**KRW 25bn**
Future bets	**KRW 15bn**
Reserve	**KRW 10bn**

~70% of spend goes to supply plus riders

KPI (exit rate)	May'24 (est.)	Dec'24 gate	Dec'25 gate	Dec'26
Share of app-hailed trips	~4%	6%	10%	13%
Monthly active riders	0.8M	1.3M	2.2M	3.0M
Weekly active drivers	~12k	18k	30k	40k
Median ETA, Seoul power zones	~9 min	≤6 min	≤5 min	≤5 min
Peak fulfilment (Seoul)	~65%	≥80%	≥85%	≥88%
Blended net take rate	~3%	3%	4.5%	5.5%
Incentive spend per trip	n/a	≤ KRW 2,500	≤ KRW 1,500	≤ KRW 800

Gate rule: if the Dec'24 gate is missed on 2+ density KPIs, Phase 2 is re-scoped to Seoul only and rider spend is cut by 30% until fulfilment recovers.

Decisions requested today

- Approve the KRW 170bn staged envelope and **release Phase 1 (KRW 40bn)**
- Approve Fair Driver Deal pricing (0% for 6 months, then 2.5%) and a published dispatch policy
- Mandate Fleet Partner negotiations (60 operators) and screening of acquisition targets (sub-scale apps, franchise fleets)
- Regional: tourist/global-account features in the H2 roadmap; access to group EV/AV partners
- Hire a GM Supply, a Head of Regulatory Affairs and a Seoul Ops war-room lead by July 2024

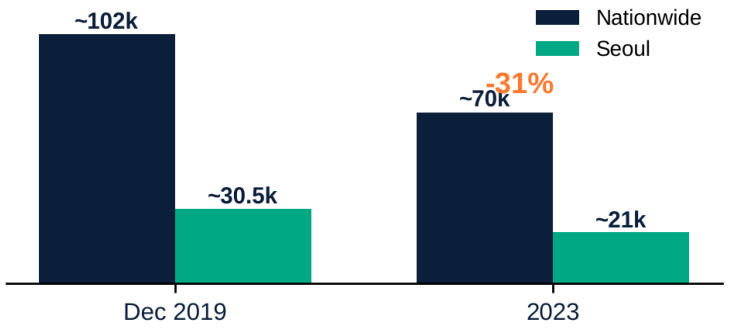

Source / notes: Base-case planning figures (Appendix A4). Baselines are internal estimates as of May 2024. Gate metrics apply to Seoul power zones unless stated. Envelope covers incentives, marketing, product/tech and pilots; it excludes baseline opex.

Appendix

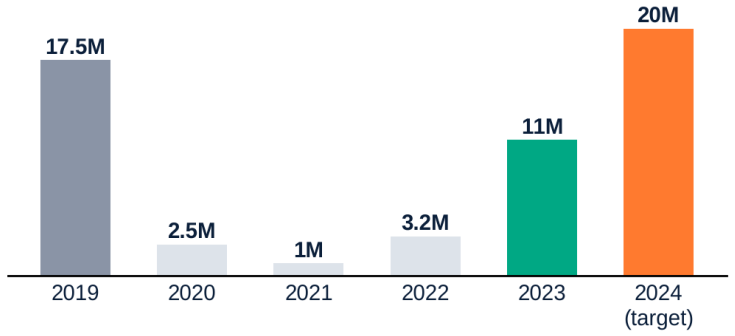

A1 Market data deep-dive | A2 Regulatory landscape & our response | A3 Competitor benchmark | A4 Financial scenario & assumptions | A5 Risks & mitigations | A6 Sources & methodology

A1. Supply is shrinking and ageing while demand is shifting toward price-sensitive locals and fast-growing inbound visitors

Corporate-taxi drivers (thousands)

Inbound visitors to Korea (millions)

Seoul fare item	Before	After
Base fare (mid-size)	KRW 3,800	KRW 4,800 (Feb 2023)
Base distance	2.0 km	1.6 km
Distance fare	KRW 100 / 132m	KRW 100 / 131m
Late-night surcharge	20%, 00:00-04:00	20-40%, 22:00-04:00 (Dec 2022)

Supply implications

- Corporate fleets are under-used: in Seoul, driver numbers barely cover one shift per vehicle
- Ageing driver base: about 1 in 4 drivers nationwide is 65+ and must pass periodic qualification tests. Night supply is thinnest just when demand peaks
- The 2022 rotation-system lift and night call fee added hours, but did not fix the driver count

Demand implications

- The fare rise made locals more selective: reliability and value now matter more than brand
- Inbound recovery (11.0M in 2023, 20M target) brings high-fare, app-native riders who prefer global apps
- Night economy (Gangnam, Hongdae, Itaewon) is still the main pain point for supply and demand

So what for SuperK-T

- **The bottleneck is drivers, not cars:** idle corporate vehicles mean supply can grow without capex
- **Younger drivers are a strategic need** for the market and a recruiting story for us (Academy)
- **Tourists are a natural beachhead** where our global account is a real moat against domestic-only apps
- **Reliability at night** is the most visible proof point of a credible #2

Source / notes: KNJCTA monthly corporate-taxi statistics (rounded); KOTSA driver qualification and TIMS data; Seoul Metropolitan Government taxi fare notices (Dec 2022 / Feb 2023); KTO Tourism Data Lab arrivals; MCST 2024 visitor target. Figures are rounded and should be refreshed from source before external use.

A2. Korea's regulation is complex but increasingly favours fair competition and supply growth. We will play it proactively

Regulation / policy	Status (May 2024)	Implication for SuperK-T	Our move
Passenger Transport Service Act: platform Types 1/2/3	In force since Apr 2021 ('Tada law'). Type 1 own-vehicle services pay a contribution and face quotas; Type 2 = franchise; Type 3 = brokerage	Licensed taxis remain the only scalable supply; ride-sharing with private cars is effectively closed	Grow via Type 2 franchise plus Type 3 brokerage; no Type 1 capex
Taxi Development Act: monthly-wage system	Seoul since Jan 2021; nationwide due 20 Aug 2024; deferral bill debated	Operators' fixed labour cost rises, so they need more revenue per shift	Fleet Partner 'productivity guarantee'; the plan works even if rollout slips
MOLIT taxi supply package (Oct 2022)	Rotation system lifted in most areas; part-time corporate driving; easier licensing; late-night call fee of up to KRW 5,000	Gives tools to add night supply and new drivers	Power zones, Academy fast-track, part-time shift pilots
Taxi pooling (hapseung)	Allowed via platforms since Jan 2022 (same-gender matching rules)	Lowers fares at night and raises trips per car	'SuperK Share' pilot in Gangnam/Hongdae (2025)
Fair competition: KFTC vs incumbent	~KRW 27bn fine (2023) for call-steering; rival-call blocking case and FSS accounting review open in 2024; Platform Competition Act shelved Feb 2024	Incumbent is constrained; 'fair platform' positioning is credible	Published dispatch rules; record and report any exclusivity pressure
Fares & surcharges (city-set)	Seoul fare reset Feb 2023; cities control fares, platforms control call fees	Price is not a lever; reliability and call-fee policy are	Compete on ETA, fixed airport fares, and call-fee transparency
EV & autonomous policy	EV taxi subsidy top-ups; Seoul AV pilot zones (Gangnam late-night pilot H2 2024)	Lower driver running costs; AV entry via pilots	SuperK Green bundle; bid for AV pilot participation

Source / notes: MOLIT; Passenger Transport Service Act (platform business types in force Apr 2021); Taxi Development Act; KFTC press releases (Feb 2023; Dec 2023 - Feb 2024 on the platform bill); Seoul Metropolitan Government. Status as of May 2024; legal review required before launch of each initiative.

A3. One dominant incumbent and a fragmented long tail. No player besides Kakao T combines scale, a global network and a credible fair-platform story, and that is the gap we fill

Player	Model & scale (approx.)	Strengths	Vulnerabilities	Our stance
Kakao T (Kakao Mobility)	~94% of app-hail calls; ~12M MAU; 40k+ Blue franchise; Venti (van), Black (premium); super-app (parking, rail, navigation)	Rider network effects, brand, data, ecosystem	KFTC/FSS scrutiny; driver resentment over fees and dispatch; monopoly image	Avoid head-on price war; win supply on fairness and segments on fit
TADA (VCNC, Toss-owned)	Premium/large-vehicle and franchise services; small Seoul fleet	Fintech parent, premium UX	Sub-scale, losses, owner reportedly seeking exit	Monitor as a possible acquisition or asset/driver pool
i.M Taxi (Jin Mobility)	Premium large-van fleet (low thousands) with salaried drivers, Seoul-focused	Service quality, consistent fleet	Capex-heavy, niche, limited reach	Possible partner for van/airport supply
Onda (Tmoney)	Low-fee app linked to the taxi associations; Seoul-centric	Association goodwill, low fees	Limited product investment and rider awareness	Engage associations; position as complementary
Municipal apps (e.g., Busan Dongbaek)	Public, low or no-fee local apps	Local government backing	Weak UX and dispatch tech	B2G / white-label partnership in Phase 2 cities
SuperK-T (us)	Est. ~4% share, ~0.8M MAU; recently rebranded; global group network	Global account, tourist reach, group tech, neutral position	Density, awareness, local UX gaps	Strong #2 by 2026 via this plan

Source / notes: KFTC (2023); company announcements and press coverage (Yonhap, Korea Herald, Korea JoongAng Daily, Maeil Business) to May 2024; third-party app trackers. Fleet sizes are approximate and indicative.

A4. Base case: ~63M trips and ~KRW 0.8tn GBV in 2026. The plan buys a durable #2 position, and core-zone contribution breakeven is targeted for H2 2026

Base case	H2 2024	2025	2026
App-dispatched taxi trips, market (M)	225	500	550
SuperK-T average share	5.0%	8.0%	11.5%
SuperK-T trips (M)	11.3	40.0	63.3
Gross bookings, GBV (KRW bn)	146	520	822
Blended net take rate	3.0%	4.5%	5.5%
Net revenue (KRW bn)	4.4	23.4	45.2
Growth investment envelope (KRW bn)	40	75	55

Scenario (2026 exit)	Share	MAU	Weekly drivers	Trigger
Bear	8%	1.8M	25k	Incumbent matches the driver deal; monthly-wage rollout deferred
Base	13%	3.0M	40k	Plan delivered; gates met on time
Bull	16%	3.8M	48k	Acquisition of a sub-scale player; further regulatory remedies

Key assumptions & sensitivities

- Each +1pt of share in 2026 is ~5.5M trips and ~KRW 72bn of GBV
- Each +0.5pt of take rate is worth ~KRW 4bn of revenue in 2026; mix shift to Van/airport/B2B is the main lever
- Incentive spend per trip falls from ≤ KRW 2,500 to ≤ KRW 800 as density improves (the core driver of breakeven)
- Payment-processing and insurance costs are modelled inside the net take rate

Investment logic

- KRW 170bn buys ~9pts of share: about KRW 19bn per point, with a ~KRW 0.8tn GBV platform by 2026
- Stage gates cap the downside: missing the Dec'24 gate limits total exposure to ~KRW 40-60bn
- Upside: Seoul power zones contribution-positive in H2 2026; company-level profitability 2027+ on mix and AV/EV cost gains

Source / notes: Team model, May 2024. Market: ~250k taxis x est. KRW 180-220k daily revenue x ~230-250 operating days ≈ KRW 10-12tn in fares (~1.0bn trips); app-dispatched share assumed at 45% in 2024 rising to 55% in 2026. Average SuperK-T fare of KRW 13,000 reflects a Seoul/airport-heavy mix. Net take = franchise fees + call fees + premium/B2B/ads, net of rider promotions. All figures are illustrative and must be validated by Finance.

A5. The main risks are the incumbent's response and cash burn. Both are managed through non-exclusive supply, zone-level discipline and stage gates

Risk	L / I	Mitigation	Early-warning indicator
Incumbent retaliation: fee cuts, driver bonuses, exclusivity pressure	H / H	Non-exclusive model; compete on fairness and dispatch transparency, not just fees; KRW 10bn reserve; document and report anticompetitive conduct to KFTC	Driver multi-homing rate; churn of franchise drivers
Monthly-wage rollout deferred or diluted	M / M	Fleet Partner pitch is based on productivity in any case; part-time shift pilots	National Assembly bill status (Jul-Aug 2024)
Driver churn once incentives taper	M / H	Earnings consistency over bonuses; tiered loyalty; daily payouts; Academy cohorts linked to Fleet Partners	90-day driver retention; hours online per driver
Cash burn above plan	M / H	Stage gates; zone-level payback rule (<9 months); weekly incentive-efficiency review	Incentive spend per trip vs gate
Regulatory or political change (call-fee caps, platform law)	M / M	Head of Regulatory Affairs; data-sharing with KOTSA and cities; working with the associations	MOLIT/Seoul consultations
Safety incident or service failure hurting the new brand	L / H	Driver screening, in-app safety, insurance, 24/7 Korean response team	Safety reports per 100k trips; app rating
Execution capacity of the Korea team	M / M	Three key hires by July 2024; regional secondments for product and ops	Roadmap delivery vs plan

Source / notes: Strategy team assessment, May 2024. L = likelihood, I = impact (H/M/L).

A6. Sources and methodology: public data as of May 2024, rounded, with internal SuperK-T baselines clearly marked as estimates

Public sources used

- **Korea Transportation Safety Authority (KOTSA):** Taxi Operation Information Management System (TIMS) data; taxi driver qualification and 65+ qualification-maintenance test statistics; transport-worker records
- **Korea National Joint Conference of Taxi Associations (KNJCTA):** monthly corporate-taxi vehicle and driver statistics, 2019-2024
- **MOLIT:** Passenger Transport Service Act (platform Types 1-3); Taxi Development Act (monthly-wage system); taxi supply measures (Oct 2022); taxi pooling (Jan 2022)
- **Seoul Metropolitan Government:** fare adjustment (Dec 2022 / Feb 2023); Climate Card (Jan 2024); autonomous-driving pilot plans
- **Korea Fair Trade Commission:** Kakao Mobility decision (Feb 2023); platform bill announcements (Dec 2023 - Feb 2024)
- **Korea Tourism Organization / MCST:** inbound arrivals 2019-2024; 2024 target of 20M visitors
- **Ministry of Environment:** 2024 EV purchase subsidy guidelines (taxi top-up)
- **App analytics:** Mobileindex (IGAWorks), WiseApp: MAU estimates, early 2024
- **Press & disclosures:** Yonhap, Korea Herald, Korea JoongAng Daily, Maeil Business, Hankyung; Kakao Corp IR

Methodology & data caveats

- **Rounding:** public figures are rounded ('~'). Driver counts compare Dec 2019 with the latest 2023 data available
- **Market size:** bottom-up (fleet x daily revenue x operating days), cross-checked against trips x average fare. App-dispatched share is a team assumption (45% in 2024)
- **Share metric:** SuperK-T share of app-hailed taxi trips (excludes street hails); KFTC's ~94% refers to general-taxi app calls
- **SuperK-T baselines** (share ~4%, MAU ~0.8M, ~12k weekly drivers, ~6k franchise, ETA ~9 min, fulfilment ~65%) are internal planning estimates and must be reconciled with BI before the investment committee
- **Regulatory status** reflects May 2024. The monthly-wage deferral bill and KFTC/FSS cases may change by August
- **Before external use:** refresh all figures from primary sources (KOTSA, KNJCTA, KTO portals)

Q&A and discussion

Questions to steer today's discussion:

- Is the KRW 170bn staged envelope, with Phase 1 at KRW 40bn, the right size for a strong #2, given the incumbent's likely response?
- Should we commit publicly to the Fair Driver Deal and published dispatch rules before the 20 Aug monthly-wage deadline?
- How much regional and group support can we secure for tourist features, the EV programme and AV partnerships?
- Which acquisition options should we screen first?
