Deep Dive
Strategy Presentation

Win reliability first.
Build Korea’s strong #2.

A localized, supply-led growth reset
Implementation from August 2024

MAY 2024 | INVESTMENT & OPERATING DISCUSSION

Case assumption: SuperK-Taxi is an anonymized challenger. UT → Uber Taxi’s March 2024 rebrand is the closest public analogue; analogue facts are not SuperK-T internal results. Public information cut-off: 31 May 2024. [S01]

01 SUPPLY
More useful online hours

02 KOREAN EXPERIENCE
Frictionless local journeys

03 RIGHT TO OPERATE
Licensed, fair and trusted

A rebrand opens the door; reliable local supply wins the market

Candid diagnosis: global brand recognition is an entry advantage—not proof of Korean product-market fit.

>90% [S08]
Kakao's taxi-hailing dominance

230,458 [S07]
Registered taxis nationally, Jul 2022

3.40m [S04]
Inbound arrivals, Q1 2024

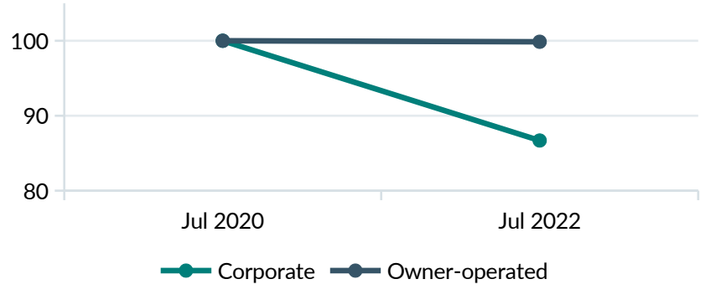

REALITY: NOT A LOGO PROBLEM

- Public analogue, Apr 2024: 0.52m MAU vs Kakao 12.56m—24× smaller. MAU ≠ trip share. [S14]
- Global access improved; losses persist: analogue FY23 operating loss ₩56.8bn. [S01, S14]
- SuperK-T trip share, online hours and margins are unverified; audit before claiming #2.

SUPPLY: HOURS, NOT LICENCE COUNT

Corporate fleet fell 13.3%

Registered-vehicle index; July 2020 = 100

All taxis: −4.3% over the same period.
Historical structural evidence—not May-2024 active supply. [S07]

STRATEGIC CHOICE

- Win Seoul microzones first: Gangnam, Yeouido, then Jongno and Mapo.
- Use inbound travel to enter; corporate and late-night riders to build repeat demand.
- Maintain the May Busan/Ulsan footprint; scale only after local service gates. [S03]

PROPOSED AMBITION ≥5% Seoul e-hail trip share Dec 2024 → ≥10% Dec 2025 → ≥10% national + ≥2× #3 Dec 2026

Sources: [S01, S03–S04, S07–S08, S14]. >90% is KCC's Nov-2023 statement; method unspecified. Share targets are completed trips—not app users.

Buy incremental online hours—not driver registrations

Supply Head accountable | Signed fleet commitments by 31 July | Incentive and dispatch reset live from 1 August.

PROPOSED DECEMBER RECRUITMENT FUNNEL · UNIQUE DRIVER IDS

30k	Eligible contacts
20k	Approved drivers
14k	First-week active
10k	Weekly active in Dec

1 / AGGREGATE EXISTING LICENSED CAPACITY

- Secure 2k staffed fleet-driver slots by December; recruit 8k owner-driver weekly actives. Do not buy vehicles.
- Recruit via depots and driver service hubs; pay referrals after 20 trips plus four-week retention—not sign-up.

2 / PAY FOR PEAK SERVICE, NOT EXCLUSIVITY

- Start August with 3k weekly actives; Thu–Sat 22:00–02:00 zone bonuses. Test ≥10% higher net earnings/hour vs control.

3 / MAKE SUPPLY OPERATIONALLY DEPENDABLE

- Fleet partners own staffed shift rosters; verify licence, qualification and insurance before activation.
- Match by eligible pickup ETA; test short-trip completion bonuses. Cap incentives; block GPS and referral fraud.
- Control room pauses customer ads if zone completion falls below 85% or P90 pickup exceeds 10 minutes.

TIMS prior: Incheon corporate-taxi use peaked at 23:00–01:00 in 2019–20. Revalidate current Seoul hotspots; do not extrapolate blindly. [S06]

DECEMBER TARGETS 10k weekly active drivers | ≥90% request → completed | P90 pickup ≤8 min | ≥70% four-week driver retention

Sources: [S06, S12]. All funnel counts and service thresholds are proposed. Multi-homing only where contracts and law permit; no promise of rival-app access.

Localize the whole journey; buy demand only where supply works

Korea Product Head + Growth Head accountable | June discovery → July release readiness → August controlled launch.

AUGUST MUST-PASS BACKLOG · VALIDATE GAPS IN JUNE

FIND	Road-name + jibun search; apartment gates and subway exits; correct road-side pickup pins and local map routing QA.
RIDE / PAY	One-tap rebook; fare estimate + tolls / night charges; local-card and wallet pilot; clear pay-in-car fallback, no double billing.
RESOLVE	24/7 Korean phone/chat; trip sharing and PIN pilot; lost-item workflow; readable, voice-assisted Korean driver app.

THREE SEGMENTS, THREE DISTINCT ACQUISITION ENGINES

Inbound travellers

Global CRM + hotel / eSIM / OTA referrals; airport pickup guides and translated messages.

Goal: 50 hotel partners; 7-day in-country repeat ≥25%.

Urban late-night riders

Employer credits + tightly geofenced referrals; Korean creative emphasizes reliable pickup, not “cheap Uber”.

Goal: domestic D30 repeat ≥35%; paid CAC ≤₩8k.

Corporate / MICE

Pilot policy controls, cost centres and itemized receipts with contracted licensed supply.

Goal: 10 anchor accounts by Sep; monthly rider repeat ≥50%.

The tourist wedge is contested: Seoul-backed TABA launched in December 2023 with overseas authentication / card support. [S05]

RELEASE & SPEND GATES June: 20 rider + 30 driver interviews / 200 mystery rides. August: payment success ≥98.5%; ads only after ≥90% completion for 2 weeks.

Sources: [S01, S04–S05, S11]. Proposed features and partner targets—not signed deals. Use a 10% eligible-user holdout for incremental acquisition and retention.

Win the right to scale: licensed taxis, fair dispatch, auditable data

Planning controls—not legal advice. Written Korea counsel sign-off is a hard launch prerequisite by 31 July.

RULE / MARKET EVIDENCE	ACTION BEFORE AUGUST	ACCOUNTABILITY
Licensed entry & supply Type 3 brokerage registration; Type 2 franchise licensing. Type 1 direct transport requires separate permission. [S02]	Stay asset-light with existing licensed taxis. Verify platform permissions, driver credentials, employment / hours terms and partner licences.	**Legal + Supply** **MOLIT / city pre-check**
Tariffs & geography Seoul base fare ₩4,800 from Feb 2023; night surcharge 20–40%. Service areas restrict dispatch. [S02, S09]	Use lawful metered fares and disclosed fees—not a US-style surge template. Encode city / airport eligibility and toll rules; approve reservation products separately.	**Legal + Product** **Tariff / airport checklist**
Fair competition KFTC's 2023 order targeted preferential allocation to affiliated taxis. [S02]	Audit ETA / eligibility-based dispatch and short-trip access. No covert affiliate preference; no blanket exclusivity. Review rival-access clauses—do not assume access.	**CEO + Compliance** **Monthly algorithm audit**
Location & personal data KCC announced taxi-platform location-data inspections in Nov 2023. [S08]	Separate necessary and optional consent; minimize retention and staff access. Validate overseas transfers and vendor safeguards; rehearse a breach-response drill.	**Privacy Lead + Legal** **Consent / transfer audit**

STAKEHOLDER COMPACT **CEO-led monthly MOLIT / Seoul dialogue + taxi-association advisory panel; share aggregate wait-time, driver-earnings and safety evidence.**

Sources: [S02, S08–S09, S12]. Jurisdiction and approved product type matter. Do not underwrite growth on deregulation, rival sanctions or private-car ride sharing.

Future leadership must lower driver costs and compound repeat usage

Sequence innovation behind a dependable core; ring-fence experiments so they cannot drain the supply-and-localization reset.

AUG–DEC 2024

Smarter reliability

- Forecast supply by zone / hour using weather and events; test empty-kilometre-aware repositioning.
- Pilot in 2 zones with 50 drivers. Share simple driver heatmaps and transparent earnings feedback.

INVESTMENT GATE

Scale only if empty km per trip fall ≥10% vs control; earnings improve and safety / completion do not worsen.

2025 → 2026

Green driver economics

- Start with 100 EV drivers through OEM, lease and charging partners; driver-owned vehicles, no fleet capex.
- Seoul's Feb-2024 plan offers up to ₩11.2m for an eligible electric taxi; budget availability is not assured. [S10]

INVESTMENT GATE

Scale at ≥10% lower all-in cost/km, including lease and charging downtime. Stretch: 20% EV share of active pool by Dec 2026.

2025 → 2026

Recurring demand

- Build corporate booking APIs, accessible-vehicle partnerships and approved reservation products.
- Retain cross-border accounts. Keep any OEM / city autonomous pilot as a licensed option—not the base-case growth engine.

INVESTMENT GATE

Require ≥80% corporate-account renewal and verified service availability. Autonomous pilot only after core contribution is positive.

LEADERSHIP PATH **Replicate a profitable Seoul playbook city by city; win ≥10% national e-hail trips and ≥2× #3 by Dec 2026. Earn the option to challenge #1.**

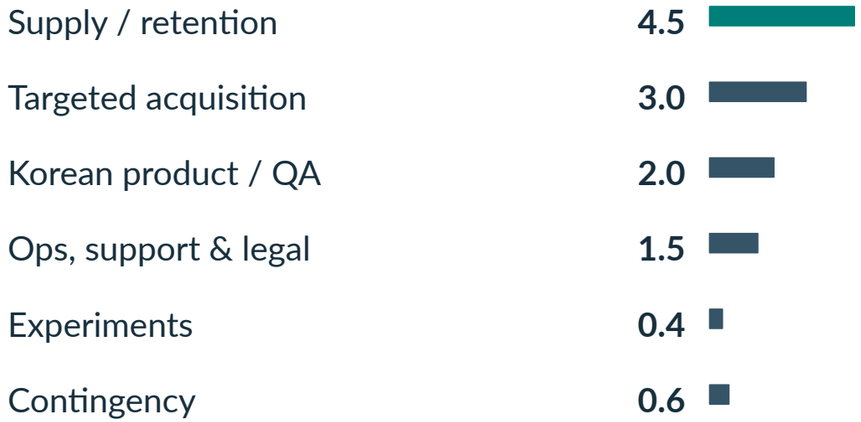

Source: [S10]. All pilot sizes, innovation gates, EV mix and leadership milestones are proposed. Measure grid-adjusted emissions intensity—not "zero-emission rides".

Approve a ₩12bn staged reset—not an open-ended subsidy war

Incremental August–December envelope; excludes existing operating burn and vehicle capex. Approve only after the June baseline / cash audit.

₩12bn

Proposed allocation · KRW billion

No nationwide blanket discounts.
Finance tracks weekly burn and incremental retained rides; all incentives sit inside the cap.

JUNE–JULY / READY

31 July: CEO readiness sign-off

Audit trip / driver cohorts and cash needs; commit 2k fleet slots; finish localization and legal checks. Use existing preparation resources.

AUG–SEP / ₩4BN

1 August: launch Gangnam + Yeouido

Regional Head releases the first tranche. Daily control room; weekly CEO scorecard. September cohorts must mature before the gate.

30 SEP / RELEASE GATE

Unlock the remaining ₩8bn only if:

≥90% completion; P90 pickup ≤8 min; domestic D30 repeat ≥35%; driver retention ≥70%; CAC ≤₩8k and modeled payback ≤9 months; no critical compliance gap.

OCT–DEC / SCALE

Expand Jongno / Mapo only after passing

December targets: 10k weekly actives; 800k monthly trips; ≥5% Seoul trip share; positive mature-cohort contribution after incentives.

STOP RULE A missed Sep gate freezes the ₩8bn release and acquisition; fix for four weeks within unspent tranche 1. A second miss closes the failing zone.

Strategy assumptions—not company guidance. Economics: at ₩18k fare, 4% effective net monetization yields ₩250/trip after ₩320 cost + ₩150 incentives; at 2%, −₩110. See A2.

Q&A

Three decisions to align today

01	**Concentrate**	Back Seoul density over immediate nationwide expansion?
02	**Bound the downside**	Approve the ₩12bn cap, with only ₩4bn initially released?
03	**Enable delivery**	Assign regional product capacity and enforce the July legal gate?

Recommendation: approve the direction and capped pilot; reserve scale capital until the service and economic gates are met.

Measure completed trips—not downloads, sign-ups or licence counts

No internal files were supplied. June baseline work is a prerequisite to validating the plan—not a reason to delay the design choices.

CASE BOUNDARY & EVIDENCE

- UT → Uber Taxi is a public analogue, not a confirmed legal identity for SuperK-T. Global-app / Korean-partner capabilities require validation. [S01]
- Cut-off: 31 May 2024. Exclude later H1 growth releases, later product launches and later regulatory decisions.
- Registered fleet (Jul 2022) is structural evidence only; it is neither active May-2024 supply nor app-affiliated supply. [S07]
- TS TIMS data are not a public nationwide app-trip denominator. Use published pre-cutoff work; secure lawful partner / city aggregates. [S06, S13]

NON-NEGOTIABLE KPI DEFINITIONS

Trip share

SuperK-T trips / all app-completed licensed taxi trips; same pickup geography / month. Panel with uncertainty range; benchmark Kakao, TADA, iM and regional apps.

Service quality

Completion = completed / valid requests, including unmatched and canceled. P90 pickup = accepted-to-arrival; pair with completion to avoid survivorship bias.

Retention / supply

WAD = unique drivers with ≥10 app trips/week.
Driver retention = activation cohort active in week 4.
Domestic D30 = second trip within 30 days of first.

Acquisition

CAC = incremental paid channel cost + first-trip credits / incremental first-completed riders versus 10% holdout. Keep recurring trip promos separate.

DECEMBER CAPACITY / DEMAND CHECK

1.08m

Illustrative monthly trip capacity

10k weekly active drivers × 5 days/week × 5 app trips/day × 4.33 weeks

800k trip target = 74% of this capacity.
This is a planning check—not a forecast.

Illustrative demand bridge:
150k domestic monthly riders × 4.5 trips
+ 50k visitors × 2.5 trips = 800k.

A ≥5% Seoul share target still requires an independently measured denominator; capacity is not evidence of share.

Sources: [S01, S06–S07, S13]. Targets and capacity / demand bridge are strategy assumptions. WAD counts drivers; the control room separately monitors active vehicles and online hours.

Low monetization—not fare size—is the economic failure point

Illustrative per-completed-trip contribution; not actual SuperK-T revenue, driver commission, fare policy or company profitability.

STEADY-STATE SENSITIVITY · KRW / COMPLETED TRIP

Effective net revenue yield	0%	2%	4% base	6%
Assumed gross fare	18,000	18,000	18,000	18,000
Net platform revenue	0	360	720	1,080
Payment / support / insurance[1]	(320)	(320)	(320)	(320)
Recurring incentives[2]	(150)	(150)	(150)	(150)
Contribution after incentives	**(470)**	**(110)**	**250**	**610**

ACQUISITION ECONOMICS AT THE 4% BASE CASE

₩8k CAC ÷ (4 trips/month × ₩250) = 8-month payback.
12-month contribution / CAC = 1.5×, before fixed costs.

Demand-side spend must pass this test with incremental retained riders—not coupon redemptions. Stop if repeat or yield deteriorates.

CRITICAL CONSTRAINTS & DOWNSIDE

Break-even yield = (320 + 150) / 18,000 = 2.61%.
At ₩800 ramp incentives: base-case contribution = −₩400/trip;
800k trips/month would burn ₩320m before CAC / fixed costs.

Free brokerage may yield 0%. Confirm a signed, lawful fee-paying mix before underwriting a 4% all-trip yield; never assume a fee on all taxi revenue.

[1] Includes incremental platform payment, support and insurance-related costs only; not the driver's taxi operating costs. [2] Excludes CAC-counted first-trip credits. All figures assumed.

Market, demand and supply evidence available before the cut-off

Bracketed source IDs throughout the deck map to the original public references below. Historical observations retain their own dates and scope.

S01 **Yonhap News Agency | 29 Feb 2024**

UT to rebrand taxi service to Uber Taxi

Public analogue only: March rebrand, existing global app access and Korean JV continuity.
